Addressing Mental Health in FIFO Work: Designing work to help protect and promote mental health

Dr Laura Fruhen & Professor Sharon Parker

Funder / Client
Mental Health Commission

Project Overview
In Western Australia, Fly-in Fly-out (FIFO) work arrangements are common, with an estimated 60,000 people engaging in these roles. High work demands, isolation from home and reduced social support are just some of the issues that can be faced by individuals in these challenging roles. Media reports and an Inquiry conducted by the Western Australian Government in 2015 identified a need for more research into FIFO worker mental health.

Recognising this, Curtin University, supported by the Mental Health Commission of Western Australia, carried out an extensive research project to better understand the mental health of FIFO workers. A clear set of factors were identified and a comprehensive list of recommendations was presented in a 300 page report.

Outcomes
The research uncovered several key findings related to the FIFO worker population:

- FIFO workers and their partners had worse mental health than comparison samples.
- Work attributes such as employment type, accommodation types, and roster types were linked to mental health outcomes.
- Support from supervisors and peers is beneficial for mental health in FIFO workers.
- Bullying and stigma were key issues in relation to mental health and wellbeing amongst FIFO workers.
- Having a culture that prioritises mental health was shown to be clearly beneficial for FIFO worker mental health and wellbeing.
